

CONTINENTAL

HYDRAULICS™

PowrFlow™ PVX Vane Pumps

POWRFLOW™ PVX VANE PUMPS

YOUR SOURCE FOR VANE PUMPS FOR THE MOST DEMANDING APPLICATIONS

What Makes PowrFlow™ PVX Vane Pumps Your Best Buy?

Continental Hydraulics PowrFlow™ PVX Vane Pumps deliver the rugged, reliable performance and value you've come to expect in all our products. They outperform sensitive piston pumps in harsh environments. PVX Vane Pumps deliver faster response, and require less external compensation compared to fixed displacement designs.

Use PVX Vane pumps in tough applications such as on machine tools, in steel mills and mines, in shipyards and foundries, in automobile plants and textile mills, in pulp and paper mills, or any place else where reliable and economical hydraulic power is needed.

Features and Benefits

- 3000 PSI Rated at Full Rated Flow on most models
8 to 75 GPM Sizes
- Compact Design saves valuable space on your product, or in your power room.
- Pressure Compensation adjusts pump delivery to demand to save energy.
- Fast Response - 20 to 50 ms depending on model.
- Fast Recovery - 70 to 500 ms at minimum flow, depending on model.
- 100% Tested
- Quiet Operation
- Three Year Warranty

Compensator Options for All Kinds of Applications

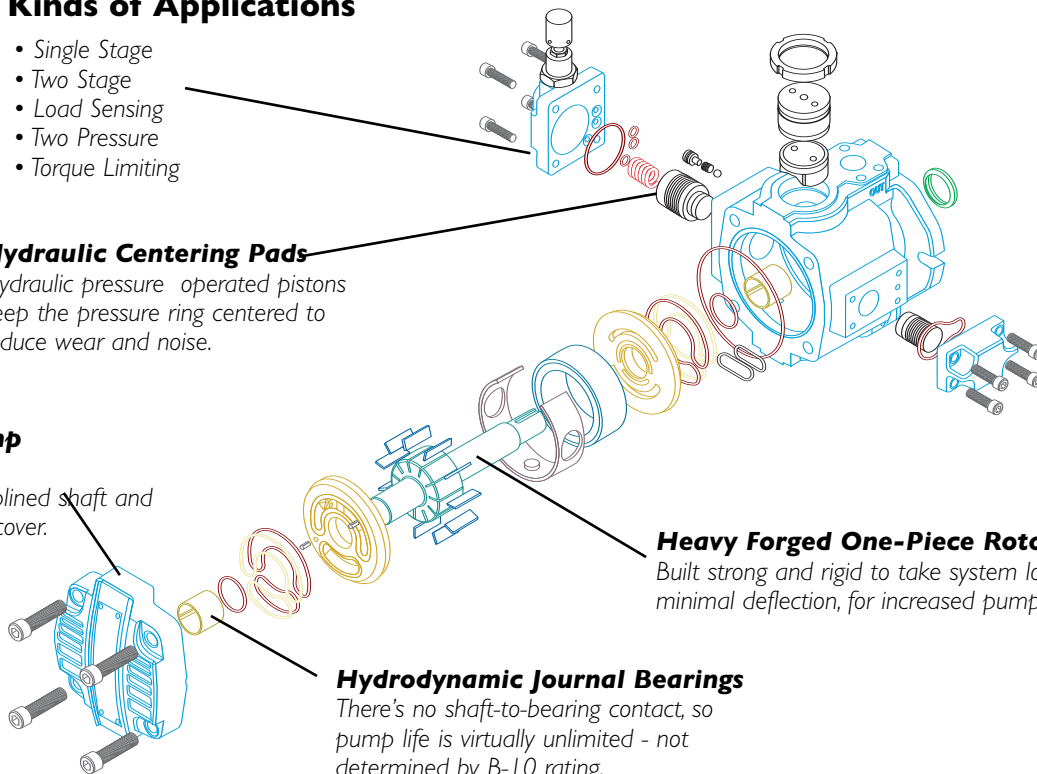

- Single Stage
- Two Stage
- Load Sensing
- Two Pressure
- Torque Limiting

Hydraulic Centering Pads

Hydraulic pressure operated pistons keep the pressure ring centered to reduce wear and noise.

Tandem Pump Capability

Available with splined shaft and tandem mount cover.

Heavy Forged One-Piece Rotor Shaft

Built strong and rigid to take system loads with minimal deflection, for increased pump life.

Hydrodynamic Journal Bearings

There's no shaft-to-bearing contact, so pump life is virtually unlimited - not determined by B-10 rating.

PVX SERIES VANE PUMPS

INTRODUCTION AND BENEFITS

This catalog introduces a new line of enhanced performance variable displacement pressure compensated vane pumps from Continental Hydraulics. Sizes range from 8 to 36 gpm; 3000 psi in "A", "B", or "C" SAE mounts and 46 to 75 gpm; 2500 psi in "D" SAE mount.

The pumps are designed to meet requirements of the machine tool, general machinery and other markets where low noise, high performance and competitive pricing are needed.

Note these improvements and features:

- Continuous duty ratings.
- Speed range 1150, 1450 and 1750 rpm.
- High efficiency at full flow.
- Quiet operation.
- Modern appearance.
- Improved ring and vane wear.
- Fast response and recovery times.
- Reduced envelope size.
- Improved controls with shock clipper.
- Conforms to the latest SAE, ISO, NFPA and ANSI standards.
- Allows full horsepower transference to pump 2 on tandem mounted pumps.
- 3 year warranty.

Benefits include:

- Competitively priced with other manufacturers of vane and axial piston pumps.
- Reduced sound levels help meet government and purchased sound requirements.
- High performance and long life design.
- Fast reaction time for critical system demands.
- Pressure compensated pumps controls delivery to circuit demands thereby conserving energy.
- Hydrodynamic journal bearings provide long life and quiet operation.
Repair kits are available from local distributor or the factory.
- Control option include single stage, two stage; load sensing, and torque limiting on most models.
- Shock clipper reduces shock pressure increasing system component life and stability.

PERFORMANCE SPECIFICATIONS

Displacement (Nominal)	1 in ³ /rev. (16 cm ³ /rev.)	
Displacement (Actual)	1.06 in ³ /rev.(16.8 cm ³ /rev.)	
Flow at 1750 rpm*	7.57 gpm (28.6 l/min.)	
Maximum continuous pressure	3000 psi (210 bar)	
Pressure compensating range	Single stage	200-3000 psi (14-210 bar) Minimum 190 psi (13 bar)
	Two stage	300-3000 psi (21-210 bar) Minimum 290 psi (19 bar)
Maximum transient spike pressure	3800 psi (260 bar)	
Maximum case pressure	10 psi (0.7 bar)	
Speed range	1150 - 1800 rpm	
Direction of rotation (viewed shaft end)	Right hand (clockwise)	
Case drain flow while compensating at 1800 rpm	1000 psi (70 bar)	0.6 gpm (2.3 l/min.)
	2000 psi (140 bar)	0.9 gpm (3.4 l/min.)
	3000 psi (210 bar)	1.26 gpm (4.8 l/min.)
Maximum inlet vacuum at sea level	6 inches Hg (152 mm Hg)	
Mounting - SAE 2 bolt flange (ISO 3019/1)	S.A.E 'A' - 2 bolt flange	
Mounting position	Unrestricted	
Port sizes	Inlet	#16 S.A.E.
	Outlet	#12 S.A.E.
	Case drain	#8 S.A.E.
	Clipper control drain (opt.)	#6 S.A.E.
	Remote control (opt.)	#4 S.A.E.
Fluid viscosity at operating temperature	Minimum	100 SUS (21 cSt)
	Maximum	1000 SUS (216 cSt)
	Optimum	150-250 SUS (32-54 cSt)
	Maximum start-up	4000 SUS (864 cSt)
Seals	Standard fluorocarbon	

Response time (Circuit dependent)	Full flow to minimum flow	20-35 ms
Response time (Circuit dependent)	Minimum flow to full flow	50-135 ms - single stage compensator
Weight	Single stage	34 lbs. (16.5 kg)
	Two stage	38 lbs. (17.3 kg)

* Flows are actual. Volumetric efficiencies shown in technical data are taken into account.

OTHER SPECIFICATIONS

- DRIVE** - Pump to be connected to prime mover by means of a flexible coupling that is aligned to a maximum of .006" (.152 mm) total indicator reading. No overhung or side loads permitted. Alignments greater than .006" (.152 mm) indicator reading could cause increased noise and vibration as well as premature shaft seal wear resulting in leakage.
- FLUID RECOMMENDATIONS** - A premium quality hydraulic oil with anti-wear additives is recommended, but not required. Consult factory for use with water base fire resistant fluids.
- FLUID TEMPERATURE** - Normal inlet fluid temperature should not exceed 140° F. (60° C.). Always select a fluid for optimum viscosity at operating temperature. Consult factory for applications assistance when inlet fluid temperatures over 140° F. (60° C.) are expected.
- FILTRATION** - Fluid cleanliness per ISO/DIS 4406 should be 18/15 or better for pressures of 2000 psi (140 bar) or less. For continuous operating pressures of 2000 to 3000 psi (140 to 210 bar), fluid cleanliness should be 17/13 or better.

PVX-8 VANE PUMPS

VARIABLE DISPLACEMENT, PRESSURE COMPENSATED

Data plotted: With oil at 120° F. (49° C.).
Viscosity @ 120° F. (49° C.) = 140 SUS.

Sound pressure levels measured in a hemi-anechoic chamber with microphone placed one (1) meter away at discrete locations. Sound pressure levels are spacially and time-weighted averaged.

Speed range	1150 - 1800 rpm
Direction of rotation (viewed shaft end)	Right hand (clockwise)
Case drain flow	1000 psi (70 bar) 1.4 gpm (5.3 l/min.) while compensating 2000 psi (140 bar) 1.8 gpm (6.8 l/min.) at 1800 rpm 3000 psi (210 bar) 2.3 gpm (8.7 l/min.)
Maximum inlet vacuum at sea level	6 inches Hg (152 mm Hg)
Mounting - SAE 2 bolt flange (ISO 3019/1)	S.A.E 'C' - 2 bolt flange
Mounting position	Unrestricted
Port sizes	Inlet 2" S.A.E.
	Outlet 1-1/4" S.A.E.
	Case drain #8 S.A.E.
	Remote control (optional) #4 S.A.E.
Fluid viscosity at operating temperature	Minimum 150 SUS (32 cSt)
	Maximum 1000 SUS (216 cSt)
	Optimum 200-300 SUS (43-65 cSt)
	Maximum start-up 4000 SUS (864 cSt)
Seals	Standard fluorocarbon

Response time (Circuit dependent)	Full flow to minimum flow	20-40 ms
Response time (Circuit dependent)	Minimum flow to full flow	100-250 ms - two stage compensator
Weight	Single stage	120 lbs. (55 kg)
	Two stage	128 lbs. (58 kg)

* Flows are actual. Volumetric efficiencies shown in technical data are taken into account.

OTHER SPECIFICATIONS

- **DRIVE** - Pump to be connected to prime mover by means of a flexible coupling that is aligned to a maximum of .006" (.152 mm) total indicator reading. No overhung or side loads permitted. Alignments greater than .006" (.152 mm) indicator reading could cause increased noise and vibration as well as premature shaft seal wear resulting in leakage.
- **FLUID RECOMMENDATIONS** - A premium quality hydraulic oil with anti-wear additives is recommended, but not required. Consult factory for use with water base fire resistant fluids.
- **FLUID TEMPERATURE** - Normal inlet fluid temperature should not exceed 140° F. (60° C.). Always select a fluid for optimum viscosity at operating temperature. Consult factory for applications assistance when inlet fluid temperatures over 140° F. (60° C.) are expected.
- **FILTRATION** - Fluid cleanliness per ISO/DIS 4406 should be 18/15 or better for pressures of 2000 psi (140 bar) or less. For continuous operating pressures of 2000 to 3000 psi (140 to 210 bar), fluid cleanliness should be 17/13 or better.

THROUGH DRIVE HORSEPOWER

The PVX Series pumps can be coupled with other pumps with standard SAE mounting patterns (PVX pumps can be coupled without losing use of stroke limiter). PVX combination pumps are rated to carry the load of an additional pump(s) equal to the maximum load of the lead PVX pump it can generate (see chart).

PUMP	FLOW @ 1750 RPM (GPM)	MAXIMUM PRESSURE (PSIG)	PUMP #1 INPUT HORSEPOWER	MAXIMUM INPUT HORSEPOWER OTHER PUMPS
PVX-8	8.03	3000	17.6	17.6
PVX-11	12.6	3000	25.3	25.3
PVX-15	15.4	3000	30.7	30.7
PVX-20	21.8	3000	43.3	43.3
PVX-29	29.6	3000	58.5	58.5
PVX-36	37.2	3000	74.6	74.6
PVX-46	46.2	3000	88.8	88.8
PVX-60	60.0	3000	117.6	117.6
PVX-75	75.8	3000	156.5	156.5

EXAMPLES:

PVX-46 @ 3045 psig + PVX-29 @ 3045 psig + PVX-11 @ 3045 psig
 88.8 HP ≥ 58.5 + 23.3

PVX-8 @ 3045 psig + PVX-8 @ 1500 psig + PVX-8 @ 1500 psig
 17.6 HP ≥ 8.7 + 8.7

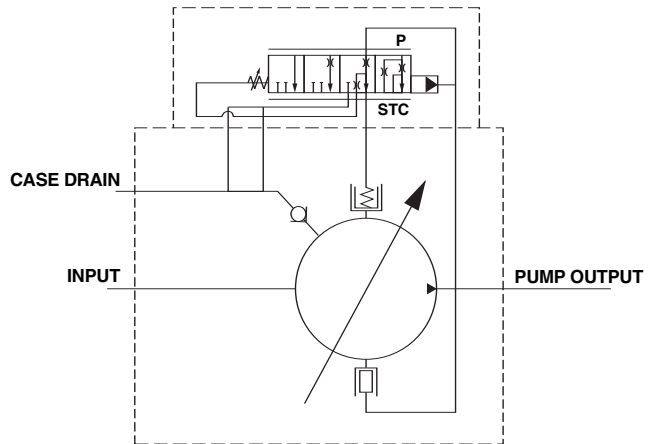

PVX SERIES VANE PUMPS

PVX PUMP CONTROLS

Schematics shown illustrate PVX20 - 75 pump controls with shock clipper integrated and no exterior plumbing required. The case drain shows an integrated check valve not present in PVX-8/11/15 pumps. All controls leave the factory preset at 500 psi (34 bar).

SINGLE STAGE COMPENSATOR — CODE 01

The single stage control for normal pressure compensation is a good choice where speed is important and remote capability is not required. This control is available on PVX-8/11/15.

TWO STAGE COMPENSATOR — CODE 17

The two (2) stage pressure compensators are the platform for most PVX controls. A remote port is standard and may, or may not be enabled according to the circuit design. This is the smoothest of the standard pressure controls, and is the standard pressure compensator for PVX-20/29/36/46/60/75.

LOAD SENSE COMPENSATOR — CODE 19

Load sense allows the user to maintain constant flow regardless of changes in load or in pump shaft rotational speed. The load sense compensator accomplishes this by using an external orifice and continually senses a pressure drop of 100 psi (7 bar) across the orifice. The minimum ΔP is 100 psi (7 bar), however, the pressure drop can be adjusted to meet circuit requirements. Consult the factory.

TWO PRESSURE COMPENSATOR — CODES 27 & 28

Solenoid two pressure compensators are available in normally open (CODE 27 — normally low, energize to high) and normally closed (CODE 28 — normally high, energize to low) versions. These two pressure controls can greatly reduce horsepower demand and heat generation during periods of idle cycle time, or when the machine operating cycle does not require maximum pressure.

TORQUE LIMITING COMPENSATOR — CODE 26

Torque limiting for PVX limits the input torque to the pump shaft, in effect limiting the horsepower transmitted to the load. No torque or horsepower sensing is done on the load, only at the pump itself. Pump output flow rate is linear and proportional to movement of the pressure ring. This compensator is adjustable in the field as torque vs. flow requirements demand. Consult the factory for adjustment procedure.

SOLENOID VENT COMPENSATOR — CODE 29 & 30

Solenoid vented compensators are similar to the two-pressure controls, except that there is no adjustable minimum. By venting the compensator the pump will go to minimum deadhead.

CODE 29 — Normally vented to minimum, energize to high pressure

CODE 30 — Normally high pressure, energize to vented minimum

PVX SERIES VANE PUMPS

REACTION CHARACTERISTICS AND SHOCK CLIPPER FUNCTION

PVX-8 single stage compensator, plot with shock clipper inactive. Response overshoot of 950 psi (66 bar), response undershoot of 700 psi (48 bar)

PVX-8 single stage compensator, plot with shock clipper active. Response overshoot of 500 psi (34 bar), response undershoot of 450 psi (31 bar)

SINGLE STAGE COMPENSATOR

COMPLETE ASSEMBLY FOR SINGLE STAGE COMPENSATOR	
SAE	264404

ATTENTION: These compensators are rated for 3000 psi (210 bar) operation. Install only on pumps rated at 3000 psi (210 bar). Activating shock clipper is highly recommended on all applications greater than 2000 psi (140 bar). Install unrestricted line back to the tank.

TWO STAGE COMPENSATOR

COMPLETE ASSEMBLY FOR TWO STAGE COMPENSATOR	
SAE	264405

COMPLETE ASSEMBLY FOR LOAD SENSE	
SAE	264406

PVX SERIES VANE PUMPS

REPAIR PARTS - PVX-20/29/36/46/60/75

TWO STAGE COMPENSATOR

COMPLETE ASSEMBLY FOR TWO STAGE COMPENSATOR	
SAE	264407

COMPLETE ASSEMBLY FOR LOAD SENSE	
SAE	264408

ATTENTION: These compensators are rated for 3000 psi (210 bar) operation. Install only on pumps rated at 3000 psi (210 bar).

NOTE: Quantity of 3, M6 socket head cap screw, not shown.
Mounts 2nd stage to 1st stage compensator.
Torque to 133 - 177 lb/in (15 - 20 Nm)

PVX SERIES VANE PUMPS

VARIABLE DISPLACEMENT, PRESSURE COMPENSATED

STROKE LIMITER ADJUSTMENT

STROKE LIMITER ADJUSTMENT			
PUMP MODEL	NOMINAL STROKE	DECREASE IN FLOW PER TURN	MINIMUM FLOW ATTAINABLE
PVX-8	0.075" (1.9 mm)	53%	<0%
PVX-11	0.080" (2.0 mm)	50%	0%
PVX-15	0.099" (2.5 mm)	40%	20%
PVX-20	0.077" (1.9 mm)	80%	<0%
PVX-30	0.106" (2.7 mm)	56%	8%
PVX-36	0.132" (2.4 mm)	44%	26%
PVX-46	0.117" (3.0 mm)	50%	17%
PVX-60	0.150" (3.8 mm)	40%	34%
PVX-75	0.186" (4.7 mm)	32%	47%

During initial start-up, volume should be at least 50% of maximum flow.

Only make adjustments to the volume control with the pump running at full flow and low pressure while observing output flow.

PVX SERIES VANE PUMPS

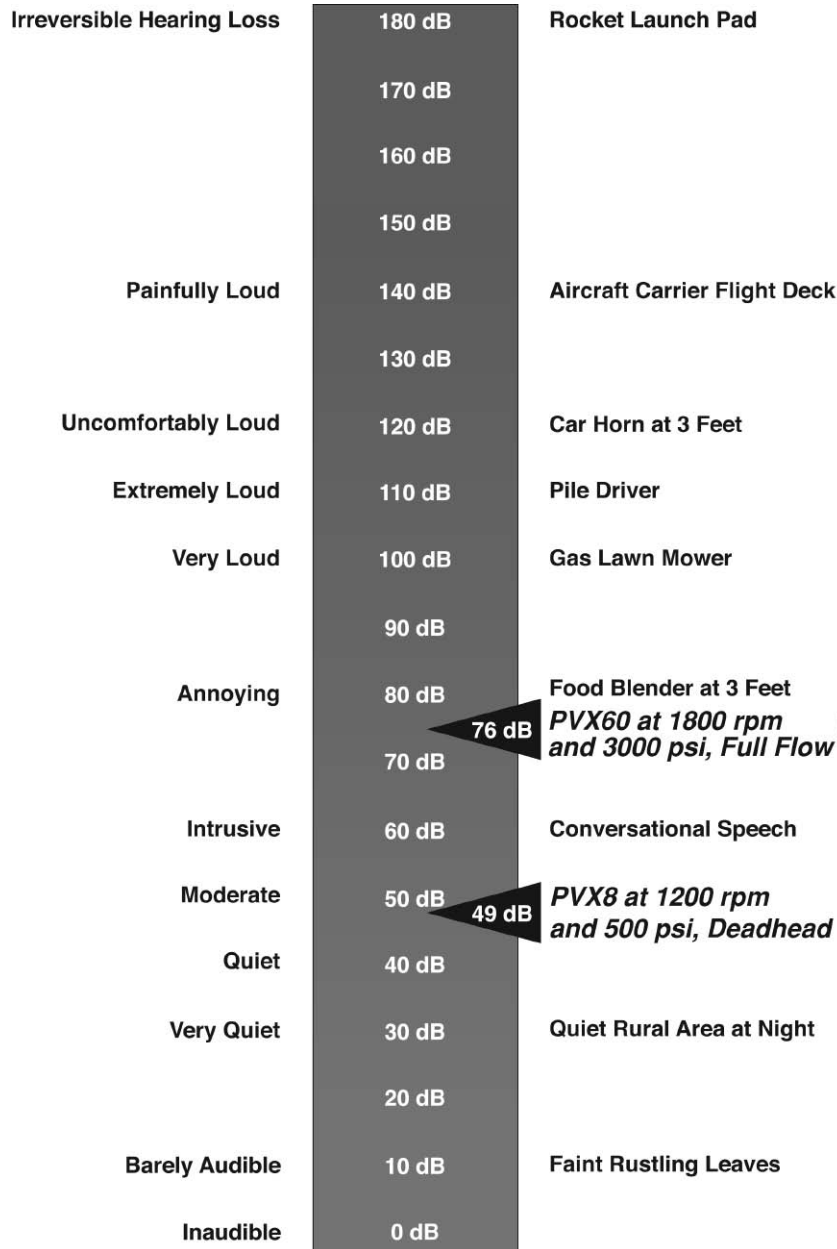

TROUBLE SHOOTING

Some of the most common difficulties that could be experienced in the field are listed here with potential causes and their remedies.

TROUBLE	POTENTIAL CAUSE	REMEDY
Excessive pump noise	1) Coupling misalignment	1) Align the pump and motor shaft to within .006 (.152 mm) of an inch total indicator reading. The tighter the alignment, the quieter the pump will be.
	2) The continuous pressure is significantly below 300 psi for 210 bar pumps.	2) The pumps have been sound tuned at rated pressure. Consult factory or raise minimum pressure 200 psi for single stage compensators in 2000 psi rated pumps, or 300 psi for 3000 psi rated pumps.
	3) Fluid in the reservoir is low and the pump is sucking air.	3) Fill the reservoir so that the fluid level is well above the end of the suction line during all of the working cycle.
	4) Restricted inlet.	4) If a suction strainer is used, check it for obstructions or dirt. It is not recommend the use of strainers as they tend to be a leading cause of cavitation which manifests as excessive noise. Check also for shop rags left in the reservoir.
	5) Air leak in the suction line.	5) Tighten all fittings. If it still leaks, smear grease over the joints to locate the leak.
	6) Suction line has too many elbows, or is too long.	6) The suction line should be as short and as straight as possible reduce the resistance to flow.
	7) Air in the fluid.	7) The return line should terminate below the fluid level to prevent splashing.
	8) Suction line is too small.	8) Suction line should always be equal in size to the suction port. Never reduce it.
	9) Vane does not move freely.	9) Contamination in the fluid or a burr in the vane slot can cause a vane to bind up. Proper filtration and/or deburring of the vane slots is required.
	10) Vane is installed incorrectly.	10) Vanes must be mounted with the rounded edge toward the ring.
	11) A vane is missing.	11) Make sure all vane slots have a vane in them.
	12) Port plates installed incorrectly.	12) Plates must be installed so that the arrows point in the same direction as the rotational arrows on the pump body.
Pump will not prime	1) Shaft rotation in the wrong direction.	1) When installing a pump, always jog the electric motor to check for proper shaft rotation. Rotation should only be clockwise (right hand) for PVX pumps.
	2) Air leak in the suction line.	2) Make sure all fittings are tight.
	3) Pump is air bound.	3) Use an air bleed valve to void the pump and suction line of air.
	4) Fluid level in the reservoir is too low.	4) Fill the reservoir so that the fluid level is well above the end of the suction line.
	5) Stroke limiter is turned in too far.	5) Flow should not be reduced more than 50% of maximum. Turn CW to restrict flow (see chart, page 41).
	6) Suction port dust plug left in place.	6) Remove plug.
Pump is unstable	1) Contamination in the compensator.	1) Thoroughly clean the control orifices and check filtration.
	2) Pressure ring is not moving properly.	2) Control piston should be checked for freedom of movement.
Pump is too hot	1) Case drain line is installed too close to the pump inlet line.	1) The case drain and pump inlet should be separated by a baffle in the reservoir.
	2) Reservoir is undersized. Rule of thumb is a minimum of 2 to 3 times pump output flow.	2) Add a cooler.

POWRFLOW™ PVX VANE PUMPS

PVX VANE PUMPS ARE DESIGNED TO BE QUIET.

PowrFlow™ PVX Vane Pumps Are Quiet.

PVX Vane Pumps are designed to be quiet. Using them in your machinery designs makes it easier to meet government mandated or purchaser required sound levels.

And, vane pumps are inherently smooth operating. Piston pumps exert push-pull forces, which can lead to hydraulic line pulsation and hammering. PVX Vane Pumps maintain constant system pressure to eliminate pulsations and associated noise.

Exclusive 3 Year Warranty

Continental Hydraulics Division warrants all vane pumps supplied by Continental Hydraulics against defects in material and workmanship under normal use and service for three years from the date of shipment.

This warranty does not cover ordinary wear and tear, abuse, misuse, overloading, altered products, use of improper fluid, or use of materials not of Continental Hydraulics manufacture or supply.

PVX SERIES VANE PUMPS

OPTIMUM OPERATING VISCOSITIES

POWRFLOW™ PVX VANE PUMPS

YOUR SOURCE FOR VANE PUMPS FOR THE MOST DEMANDING APPLICATIONS

Why settle for “close enough” when you need hydraulics?

Continental Hydraulics offers a complete line of products to meet your need for reliable, precise fluid power. In addition to the PVX Vane Pumps shown in this catalog, Continental also offers vane and piston pumps, a full line of control valves, integrated hydraulic circuits, and hydraulic power units.

Continental's products are used in diverse applications such as plastic molding machinery, machine tools, pulp and paper machines, marine auxiliary power controls and deck handling equipment, and masonry product production equipment.

Distributors who know how to help — Anyone can say, “Here’s our catalog, take your pick.” Continental Distributors work with you to find out what you need, and with our engineers to make sure you get it.

Service and support — To provide maximum service and assistance, Continental Hydraulics maintains a strong distribution network, with representatives throughout North America and around the world. The average Continental Distributor has been with us for 15 years. He’s got repair and

replacement parts, and the skill to solve your hydraulics problem.

Our Distributors work hand-in-hand with our Engineers to select components and build systems that will meet your toughest specifications. And they’ll suggest creative solutions that can help save money or enhance performance.

Whether you need a complete hydraulic power supply or a single directional control valve, come to Continental.
